Sequence 376, Application US/09925301

Patent No. US2020052308A1

GENERAL INFORMATION:

APPLICANT: ROSEON et al.

TILLE OF INVENTION: Nucleic Acids, Proteins and Antibodies FILE REFERENCE: PA106

CURRENT APPLICATION NUMBER: US/09/925,301

CURRENT APPLICATION NUMBER: DCT/US00/05882

PRIOR FILING DATE: 2001-08-10

PRIOR FILING DATE: 1999-03-12

PRIOR FILING DATE: 1999-03-12

NUMBER OF SEQ ID NOS: 1694

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 376

LENGTH: 2018
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 10; Length 2018;

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present sequence is that of an isolated nucleic acid, designated ESP002_C2, of Exophiala spinifera isolate ESP002, which encodes an amino polyol amine oxidase (APAO, see AAY58900) capable of degrading fumonish, its hydrolysis product API, and related mycotoxins. The DNA was obtained by PCR amplification of related mycotoxins. The DNA was obtained by PCR amplification of ESP002 mycellal DNA using primers based on APAO of E. Spinifera ATCC 74269. The invention provides APAO polynucleotides (see AAX58383-87) and polypeptides (see AAY58900-05) of E. spinifera and AAX58383-87) and polypeptides (see AAY58900-05) of E. spinifera and plant cells normally susceptible to Fusarium or other toxin-producing fungus infection. Transgenic plants can be regenerated from the transformed plant cells. Also provided are methods for expressing both APAO and a fumonish-esterase in a transgenic plant, and for producing APAO enzyme in prokaryotic and non-plant eukaryotic systems. Transgenic plants capable of degrading fumonish or of perducing the degrading enzymes are provided. Methods for special containing the degrading enzymes are provided. Methods for expressing the degrading enzymes are provided. Methods for an animal feed and rumen microorganisms are also disclosed. APAO
                                                                                                                                                                                                                    New isolated polynucleotides, polypeptides useful for detecting and degrading fumonisin or structurally related mycotoxin in processed grain or in silage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1929 BP; 451 A; 537 C; 532 G; 409 T; 0 other;

The present sequence is that of an isolated nucleic acid, designated ESP002_C3, of Exophiala spinifera isolate ESP002, which encodes an amino polyol amine oxidase (APAO, see ARYS8901) capable of degrading fumonisin, its hydrolysis product API, and related mycotoxins. The DNA was obtained by PCR amplification of ESP002 mycolial DNA using primers based on APAO of E. spinifera ATCC 74269. The invention provides APAO polynucleotides (see AAXS833-87) and polypeptides (see AAYS8900-05) of E. spinifera and Rhinocladiella atrovirens. The polynucleotides are used to transform plant cells normally susceptible to Fusarium or other toxin-producing plant cells normally susceptible to Fusarium or other toxin-producing changes infection. Transgenic plants can be regenerated from the transformed plant cells. Also provided are methods for expressing both APAO enzyme in prokaryotic and non-plant eukaryotic systems. Transgenic plants capable of degrading fumonisin or of producing the degrading enzymes are provided. Methods for cystems. Transgenic plants capable of degrading fumonisin or of producing the degrading enzymes are provided. Methods for detoxification of grain, grain processing, silage, food crops and channal feed and rumen microorganisms are also disclosed. APAO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTCCAGAGGACGACCGGAAATTCAATCCATCAAGCACAAGACGGTACAACCACTACAGCT 720

The present sequence is that of polynucleotide k0n0-395_6.5, which encodes a truncated, but still functional, amino polyol amine oxidase canceds a truncated, but still functional, amino polyol amine oxidase (APAO, see AAYS9806). The polynucleotide was obtained by 3' and 5' RACE PCR using k0n0-395.5 (see AAZ58388), a partial APAO CDNA of Exophiala spinifera. APAO is capable of degrading fumonisin, its provides APAO polynucleotides (see AAZ58383-87) and polypeptides (see AAX58900-05) of E. Spinifera and Rhinocladialla atrovirens. The convention of Exophiale to Fusarium or other toxin-producing fungus infection. Also provided are methods for expressing APAO in transgenic plants, prokaryotic and non-plant eukaryotic systems. Methods for detoxification of grain, grain processing, silage, food crops and in animal feed and rumen microcryanisms are also disclosed. APAO polynucleotide can also be used as a selectable marker.

oxidase (APAO). The enzyme has homlology to the flavin containing amine oxidase family, that oxidise primary amine to an aldehyde or ketone, releasing ammonia and hydrogen peroxide. The APAO enzyme degrades mycotoxins that promote fungal invasion of plants. Destruction of mycotoxins by ARAO generates, as a by-product, hydrogen peroxide which is itself an antimicrobial and stimulates the plants own defensive systems. The APAO polynucleoxides are used to generate plants (particularly maize) that are resistant to Fusarium or other funging that produce mycotoxins and/or to degrade such mycotoxins (e.g. during ensilaging); for recombinant production of APAO polypeptides; as selection markers for plant transformation; and to isolate related sequences from other organisms. The APAO polypeptides are used to degrade mycotoxins in plant materials, including expression in engineered bacteria and fungi, e.g. rumen microflora.
                                                                                                                                                                                                                                                                                                                                                                                                       1134

The present sequence encodes an Exophiala spinifera aminopolyol amine oxidase (APAO). The enzyme has homlology to the flavin containing amine oxidase family, that oxidase primary amine to an aldehyde or ketone, releasing ammonia and hydrogen peroxide. The APAO enzyme degrades mycotoxins that promote fungal invasion of plants. Destruction of mycotoxins by APAO generates, as a by-product, hydrogen peroxide which is itself an antimicrobial and stimulates the plants own defensive systems. The APAO polynucleotides are used to generate plants (particularly maize) that are resistant to Fusarium or other funging that produce mycotoxins and/or to degrade such mycotoxins (e.g. during ensilaging); for recombinant production of APAO polypeptides, as selection markers for plant transformation; and to isolate related sequences from other organisms. The APAO polypeptides are used to degrade mycotoxins in plant materials, including expression in engineered bacteria and fungi, e.g. rumen microflora.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1018 CAATGGTCCATTACCTGTTTCATGGTCGGAGACCCGGGACGGAAGTGGTCCCAACAGGTCC 1077

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of a polynucleotide encoded a truncated, but still functional, amino polyol amine oxidase (K:trAPAO, see AAY5899) of Exophiala spinifera. The polynucleotide was derived from clone k0n0-395_6.5 (see AAZ5832) to which was added a 5' lysine codon (nucleotides 1-3), since many amine oxidases have a positively charged amino acid near the N-terminus and upstream of a dinucleotide binding capte. The construct allowed heterologous expression of trAPAO in plotha pastoris and maize. The polynucleotides APA58983-87) and polypeptides (see AAY58900-05) of E. spinifera and Rainocladdella atrovirens. The polynucleotides are used to transform plant cells normally susceptible to Fusarium or other toxin-producing fungus infection. Also provided are methods for expressing APAO in transfernic captoxification of grain, grain processing APAO in transfernic detoxification of grain, grain processing sites, food crops and in animal feed and rumen microorganisms are also disclosed. APAO polynucleotide can also be used as a selectable marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1914

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of polynucleotide k0n0-395_5.4, which encodes a truncated, but still functional, amino polyol amine oxidase (trAPAO-1, see AAY58907 and AAY58908). The polynucleotide was obtained by 3' and 5' RACE PCR using k0n0-385.5 (see AAZ58888), a partial APAO CDNA of Exophiala spinifera. APAO is capable of degrading fumonisin, its hydrolysis product AP1 and related myxotoxins. The invention provides APAO polynucleotides (see AAZ58383-87) and polypeptides (see AAZ58900-05) of E. spinifera and Rhinocladiella atrovirens. The polynucleotides are used to transform plant cells normally susceptible to Fusarium or other toxin-producing fungus infection. Also provided are methods for expressing APAO in transgenic plants,

                                                                                                                                                                                                                                             The present sequence encodes an Exophiala spinifera aminopolyol amine oxidase (APAO). The enzyme has homlology to the flavin containing amine oxidase family, that oxidise primary amine to an aldehyde or ketone,
                                                                                                                                                                                                                                                                                    releasing ammonia and hydrogen percoxide. The APAO enzyme degrades mycotoxins that promote fungal invasion of plants. Destruction of mycotoxins that promote fungal invasion of plants. Destruction of mycotoxins by APAO generates, as a by product, hydrogen peroxide which is itself an antimicrobial and stimulates the plants own defensive systems. The APAO polynucleotides are used to generate plants for that are resistant to Fusarium or other fungitate that produce mycotoxins and/or to degrade such mycotoxins (e.g. during ensilaging); for recombinant production of APAO polypeptides; as selection markers for plant transformation; and to isolate related sequences from other organisms. The APAO polypeptides are used to degrade mycotoxins in plant materials, including expression in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1247

The construct was designed for expression and secretion of the construct was designed for expression and secretion of the construct was designed for expression and secretion of its capable of degrading fumonisin and related mycotoxins. The invention provides APAO polynucleotides (see AAX58383-87) and polypeptides (see AAX58000-05) of E. spinifera and Rhinocladiella atrovirens. The polynucleotides are used to transform plant cells normally susceptible to Fusatium or other toxin-producing fungus infection. Also provided are methods for expressing APAO in transgenic plants, provexyotic and non-plant eukaryotic systems. Methods for detoxification of grain, grain processing, silage, food crops and in animal feed and rumen microorganisms are also disclosed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1555 CAATGGTCCATTACCTGTTTCATGGTCGGAGACCCGGGACGGAAGTGGTCCCAACAGTCC 1614

The present sequence encodes an Exophiala spinifera aminopolyol amine oxidase (APAO). The APAO enzyme has homlology to the flavin containing amine oxidase family, that oxidase primary amine to an oxidase family, that oxidase primary amine to an addehyde or ketone, releasing ammonia and hydrogen peroxide. The APAO enzyme degrades mycotoxins that promote fungal invasion of plants. Destruction of mycotoxins by APAO generates, as a by product, hydrogen peroxide which is itself an antimicrobial and stimulates the plants own defensive systems. The APAO polynucleotides are used to generate plants (particularly maize) that are resistant to Fusarium or other fungict that produce mycotoxins and/or to degrade such mycotoxins (e.g. during ensilaging); for recombinant production of APAO polypeptides; as selection markers for plant transformation; and to isolate related sequences from other organisms. The APAO polypeptides are used to degrade mycotoxins in plant materials, including expression in engineered bacteria and fungi, e.g. rumen microflora.
                                                                                                                                                                                                                                                                                                                                                                                                                    fungi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1330 AGAACGCCGTTCAAGAGTGTTCATTTCGTTGGAACGGAGACGTCTTTAGTTTGGAAAGGG 1389

                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of polynucleotide ppiczalphaA:K:trAPAO cencoding a protein (see AAY58910) comprising the yeast alpha mating factor signal peptide fused with K:trAPAO, a truncated, but functional, amino polyol amine oxidase (APAO, see also AAY58909) of functional, amino polyol amine oxidase (APAO, see also AAY5809) of functional aspinifera. The polynucleotide was designed for expression in Pichia pastoris. The encoded protein is capable of degrading fumonisin and related mycotoxins. The invention provides APAO of polynucleotides (see AAY58083-87) and polypeptides (see AAY58000-05) of E. spinifera and Rhinocladiella atrovirens. The polynucleotides are used to transform plant cells normally susceptible to Rusarium or other toxin-producing fingus infection. Also provided are methods for expressing, silage, food crops and in animal feed and rumen microorganisms are also disclosed. APAO polynucleotide can also be used as a selectable marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             οĘ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1351 AAGCAGGTACGACAAAAAGTCTGTCTGGGACCAACTCCGCGCGGCGTACGAGAACGCCGGG 1410

The present sequence encodes a Exophiala spinifera aminopolyol amine oxidase (APAO). The enzyme has homlology to the flavin containing amine oxidase family, that oxidise primary amine to an aldehyde or Ketone, releasing ammonia and hydrogen peroxide. The APAO enzyme degrades mycotoxins that promote fungal invasion of plants. Destruction of mycotoxins by APAO generates, as a by-product, hydrogen peroxide which is itself an antimicrobial and stimulates the plants own defensive systems. The APAO polynucleotides are used to generate plants (particularly maize) that are resistant to Fusarium or other fungi
                                                                                                                                                               oolyol amine oxidase; APAO; mycotoxin degradation; antimicrobial; fungal invasion; hydrogen peroxide; Fusarium; fungi; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1..267

that produce mycotoxins and/or to degrade such mycotoxins (e.g. during ensilaging); for recombinant production of APAO polypeptides; as selection markers for plant transformation; and to isolate related sequences from other organisms. The APAO polypeptides are used to degrade mycotoxins in plant materials, including expression in engineered bacteria and fungi, e.g. rumen microflora.

                                                                                                                                                                                            The present sequence is that of the coding region of full-length amino polyol amino exidase (APAO) cDNA of Exophiala spinifera 2141.10. APAO is capable of degrading fumonisin, its hydrolysis product API, and related myocoxins. The invention provides APAO is polymucleotides (see AAX58818-87) and polypeptides (see AAX58800-05) of E. spinifera and Rhinocladiella atrovirens The polymucleotides are used to transform plant cells normally susceptible to Fusarium or other toxin-producing fungus infection. Transgenic plants can be regenerated from the transformed plant cells. Also provided are methods for expressing both APAO and a fumonisin-esterase in a cransgenic plant, and for producing APAO enzyme in prokaryotic and non-plant eukaryotic systems. Transgenic plants capable of degrading fumonisin or of producing the degrading enzymes are provided. Companies for decoxification of gradin grain processing, slage, food crops and in animal feed and rumen microorganisms are also disclosed. APAO polynucleotide is also useful as a selectable marker.
                                                                                                                                                                                                                                                                                                                                              of

                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes a full length Exophiala spinifera aminopolyol amino oxidase (APAO). The enzyme has homlology to the aminopolyol amine oxidase family, that oxidise primary amine to an aldehyde or ketone, releasing ammonia and hydrogen peroxide.

The APAO enzyme degradese mycotoxins that promote fungal invasion of plants. Destruction of mycotoxins by APAO generates, as a by-product, plants own defensive systems. The APAO polynucleotides are used to generate plants (particularly maize) that are resistant to fusarium or coher fungi that produce mycotoxins and/or to degrade such mycotoxins (e.g. during ensilaging): for recombinant production of APAO polypeptides; as selection markers for plant transformation; and to clayeptides; as selection markers for plant transformation; and to clayeptides as selection markers for plant transformation; and to care used to degrade mycotoxins in plant materials, including expression in engineered bacteria and fungi, e.g. rumen microflora.

The present sequence is that of an isolated nucleic acid, designated ESP003_C12, of Exophiala spinifera isolate ESP002, which encodes an amino polyol amine oxidase (APAO, see AAY58902) capable of degrading fumonishi, its hydrolysis product API, and related mycotoxins. The DNA was obtained by PCR amplification of ESP003 mycelial DNA using primers based on APAO of E. spinifera ATCC 74269. The invention provides APAO polynucleotides (see AASS883-87) and polypeptides (see AAYS8900-05) of E. spinifera and Rhinocladiella atrovirens. The polynucleotides are used to ransform plant cells normally susceptible to Fusarium or other toxin-producing plant cells infection. Transpenic plants can be regenerated from the transformed plant cells. Based provided are methods for expressing both APAO and a fumonisin-esterase in a transgenic plant, and for systems. Transgenic plants capable of degrading fumonisin or of producing the degrading enzymes are provided. Methods for detoxification of grain, grain processing, sliage, food crops and in animal feed and rumen microcapanisms are also disclosed. APAO APAO APAO Colynucleotide is also useful as a selectable marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotides, polypeptides useful for detecting and degrading fumonisin or structurally related mycotoxin in processed grain or in silage \varepsilon

181 bp mRNA linear EST 22-MAR-2002
DKFZp686H1969_r1 686 (synonym: hlcc3) Homo sapiens cDNA clone
DKFZp686H1969 5', mRNA sequence.
/clone_lib="Plasmodium yoelii infected liver tissues"
/tissue_type="liver"
/note="Organ: liver; P. yoelii sporozoites were IV
injected into BALB/c mice and livers were harvested 24
hours post injection. Total RNA was processed and
differential display was performed on the infected liver
samples along with uninfected BALB/c liver control."

Patent No. 6211434

GENERAL INFORMATION:
APPLICANT: DUVICK, Jonathan P.
APPLICANT: Gilliam, Jacob T.
APPLICANT: Maddox, Joyce R.
TITLE OF INVENTION: Amino Polyol Amine Oxidase
TITLE OF INVENTION: Polynuclectides and Related Polypeptides and Methods of Use
FILE REFERENCE: 1134
CURRENT FILINO NUMBER: 60/092,936
FALLER APPLICATION NUMBER: 60/092,936
EARLIER APPLICATION NUMBER: 60/135,159A
CURRENT FILING DATE: 1999-07-12
EARLIER APPLICATION NUMBER: 60/135,391
SAFILER FILING DATE: 1999-05-21
NUMBER OF SEQ ID NOS: 46
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 10
LENGTH: 1392

Sequence 20, Application US/09352159A;
Patent No. 6211434
GENERAL INFORMATION:
APPLICANT: Duvick, Jonathan P.
APPLICANT: Gilliam, Jacob T.
APPLICANT: Maino Polyol Amine Oxidase
TITLE OF INVENTION: Amino Polyol Amine Oxidase
TITLE OF INVENTION: Polynucleotides and Related Polypeptides and Methods of Use
FILE REPRENCE: 1134
CURRENT APPLICATION NUMBER: 60/092,936
EARLIER PILING DATE: 1998-07-12
EARLIER PILING DATE: 1998-07-25
EARLIER PILING DATE: 1998-07-25
EARLIER FILING DATE: 1998-05-21
NUMBER OF SEQ ID NOS: 46
SOFTWARR: FastSEQ for Windows Version 3.0

NAME/KEY: CDS.
(1461)
COCATION: (1)...(1461)
OTHER INFORMATION: Nucleotide sequence of K:traPAO translational
OTHER INFORMATION: for expression and secretion of the mature traPAO
OTHER INFORMATION: in maize. Nucleotides 1-72, barley alpha amylase
OTHER INFORMATION: in maize. Nucleotides 1-72, barley alpha amylase
OTHER INFORMATION: signal sequence, nucleotides 775, added lysine
OTHER INFORMATION: residue; nucleotides 76 -1464, traPAO cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0;

; Sequence 39, Application US/09352159A
; Patent No. 6211434
; GENERAL INFORMATION:
; APPLICANT: Duvick, Jonathan P.
; APPLICANT: Gilliam, Jacob T.
; APPLICANT: Maddox, Joyce R.
; TITLE OF INVENTION: Amino Polyol Amine Oxidase
; TITLE OF INVENTION: Polyoucleotides and Related Polypeptides and Methods of Use
; TITLE OF INVENTION: NUMBER: US/09/352,159A
; CURRENT APPLICATION NUMBER: 60/092,936
; EARLIER APPLICATION NUMBER: 60/092,936
; EARLIER FILLING DATE: 1999-05-21
; BARLIER PLING DATE: 1999-05-21
; NUMBER OF SEQ ID NOS: 46
; SOFTWARE: FastSEQ for Windows Version 3.0
; SEQ ID NO 39
; LENGTH: 1930
APPLICANT: Maddox, Joyce R.

Sequence 10314, Application US/09878574

Sequence 10314, Application US/09878574

Patent No. US20020110548A1

GENERAL INFORMATION:
APPLICANT: Dayrum, Joseph R.
TATLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with
TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with
TITLE OF INVENTION: US/09/878,574

CURRENT APPLICATION NUMBER: US/09/878,574

CURRENT FILING DATE: 1999-06-14

PRIOR PEPLICATION NUMBER: 09/333,535

PRIOR FILING DATE: 1999-06-14

NUMBER OF SEQ ID NOS: 15775

SEQ ID NO 10314
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 7447, Application US/09878574

Patent No. US20020110548A1

GENERAL INFORMATION:
APPLICANT: Byrum, Joseph R.
APPLICANT: Thompson, Michael D.
TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with
TITLE OF INVENTION: Plants
FILE REFERENCE: 38-21(15401)8

CURRENT APPLICATION NUMBER: US/09/878,574

CURRENT FILING DATE: 2001-12-21

PRIOR PRILING DATE: 1999-06-14
